

# End-to-end pipeline test guide

Every pipeline of the platform, from an idea to a measured, completed project, tested with three accounts. Tick each step as it passes.

| Name in this guide | Account            | Plays the part of                                                                                                                                                   |
|--------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ADMIN</b>       | admin@example.com  | Runs the platform. Takes the <b>Intake</b> role (routes ideas to a review team), <b>Decisions &amp; proposals</b> and <b>Delivery manager</b> (assigns developers). |
| <b>OWNER</b>       | owner@example.com  | The person with the problem: writes every idea, gives the go-ahead, accepts the work (UAT) and records the results. Never reviews or builds.                        |
| <b>HELPER</b>      | helper@example.com | Owner of a test organization and team, platform reviewer (team lead), proposal writer, then the developer. Never writes an idea.                                    |

**Why three people are enough.** The platform refuses one person playing two parts on the same idea: an author cannot review their own idea, an idea cannot go to a review team that contains its author, whoever wrote a proposal cannot release it, and the developer cannot accept their own work. With the parts above, no step breaks those rules, and several steps below check that the refusals really happen.

**Three separate browser sessions are required.** ADMIN in normal Chrome, OWNER in a Chrome incognito window, HELPER in Firefox, Edge or a second Chrome profile. Two incognito windows of the same browser share one login.

**Emails are printed, not sent.** Invitation and activation links appear in the **backend terminal** (the one running runserver). Copy them from there.

**If a step fails,** write down the step number, who was signed in, and the exact message on screen. If the page says "We could not load...", copy the last error lines from the backend terminal too.

## Start the app (two terminals)

```
cd backend && .venv/bin/python manage.py runserver
cd frontend && npm run dev
```

## Part 0 · Preparation

Done once. Roles are given in the console; no commands are needed.

| # | Who    | Do this                                                                                                                                                                 | You should see                                                                                           | ✓                        |
|---|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------|
| 1 | ALL    | Log in: each person in their own browser session.                                                                                                                       | Each person sees their workspace.                                                                        | <input type="checkbox"/> |
| 2 | ALL    | OWNER and HELPER: <b>Settings</b> → <b>Profile</b> . Give the two accounts different names, e.g. "Owner Test" and "Helper Test".                                        | Accounts that share a name are hard to tell apart: the team-lead list shows names only.                  | <input type="checkbox"/> |
| 3 | ADMIN  | <b>/app/admin/roles</b> (Platform roles): add your own email as <b>Intake, Decisions &amp; proposals</b> and <b>Delivery manager</b> . Add HELPER as <b>Developer</b> . | "Role given." under each card; the person appears in the list.                                           | <input type="checkbox"/> |
| 4 | ADMIN  | Refresh the page (F5).                                                                                                                                                  | New powers take effect after a refresh.                                                                  | <input type="checkbox"/> |
| 5 | ADMIN  | <b>/app/admin/reviewers</b> : Make reviewer with HELPER's email. Then Form a review team: name "Review Team 1", Lead = Helper Test.                                     | HELPER listed as reviewer; the team shows "Helper Test (lead)", Active.                                  | <input type="checkbox"/> |
| 6 | HELPER | Refresh.                                                                                                                                                                | <b>Reviews</b> appears in the top bar. <b>No Admin button</b> : the console is the administrator's only. | <input type="checkbox"/> |

## Part A · Individual idea, all the way to a completed project

The main pipeline: idea → platform review → proposal → go-ahead → assignment → build → test → UAT → deployment → impact → completed.

| #  | Who    | Do this                                                                                                                                                                                                                     | You should see                                                                 | ✓                        |
|----|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|--------------------------|
| 7  | OWNER  | <b>/app/ideas/new</b> : level <b>Individual</b> , fill in the guided form, attach a PDF, click <b>Submit for review</b> .                                                                                                   | Status Submitted.                                                              | <input type="checkbox"/> |
| 8  | ADMIN  | <b>/app/admin/ideas</b> → on the idea's row click <b>Assign to review team</b> → the idea opens on the team picker → choose Review Team 1 → <b>Assign</b> .                                                                 | The list's Review team column now says Review Team 1.                          | <input type="checkbox"/> |
| 9  | HELPER | <b>Reviews</b> → Review queue tab → click the idea → <b>Start review</b> .                                                                                                                                                  | OWNER's idea reads Under review.                                               | <input type="checkbox"/> |
| 10 | HELPER | <b>Request changes</b> : "Please attach the current process document".                                                                                                                                                      | OWNER gets a notification; status Changes requested.                           | <input type="checkbox"/> |
| 11 | OWNER  | Open the idea: the <b>Respond to the review</b> panel shows what was asked. <b>Revise idea</b> → <b>Save changes</b> ; <b>Go to documents</b> → attach a file; write what you changed → <b>Send response and resubmit</b> . | Submitted again (version 2); the changes-requested notification clears.        | <input type="checkbox"/> |
| 12 | HELPER | Open it in the queue: <b>the owner's response</b> is at the top. <b>Start review</b> (round 2): rate all five criteria → <b>Approved</b> → <b>Record decision</b> .                                                         | Recorded. OWNER is <b>not</b> told yet and still sees Under review.            | <input type="checkbox"/> |
| 13 | HELPER | Open the idea page → <b>Proposal</b> section.                                                                                                                                                                               | "Approved - waiting for the platform admin". <b>No Start</b> button yet.       | <input type="checkbox"/> |
| 14 | ADMIN  | <b>/app/admin/decisions</b> : read the team's feedback and the drafted congratulations letter, edit it if you like → <b>Send to owner and open the proposal</b> .                                                           | Sent. HELPER is notified: "You can now write the proposal".                    | <input type="checkbox"/> |
| 15 | OWNER  | Open the notification (and the email in the backend terminal).                                                                                                                                                              | A green <b>Congratulations</b> letter at the top of the idea; status Approved. | <input type="checkbox"/> |

| #  | Who    | Do this                                                                                                                                                                                                                     | You should see                                                                          | ✓                        |
|----|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|--------------------------|
| 16 | HELPER | <b>Reviews</b> → My work → <b>Start the proposal</b> . Fill in only the executive summary and send it.                                                                                                                      | <b>Refused:</b> "Fill in the ... before sending it".                                    | <input type="checkbox"/> |
| 17 | HELPER | Fill in <b>every</b> section (summary, problem, feasibility, solution, requirements, scope, deliverables, timeline, milestones, financial requirements, <b>Owner pays = Yes</b> , payment plan, acceptance criteria). Send. | Sent to the admin.                                                                      | <input type="checkbox"/> |
| 18 | OWNER  | Open the idea.                                                                                                                                                                                                              | The proposal is <b>not visible</b> yet.                                                 | <input type="checkbox"/> |
| 19 | ADMIN  | <b>/app/admin/proposals:</b> check the board, then <b>Send back</b> with feedback.                                                                                                                                          | Board shows the lead, sections and contributions; returned to HELPER.                   | <input type="checkbox"/> |
| 20 | HELPER | Fix the timeline → send again.                                                                                                                                                                                              | Back with the admin.                                                                    | <input type="checkbox"/> |
| 21 | ADMIN  | <b>Release.</b>                                                                                                                                                                                                             | OWNER is notified.                                                                      | <input type="checkbox"/> |
| 22 | OWNER  | Open the proposal (notification, or <b>/app/ideas/&lt;id&gt;/proposal</b> ). Try to copy text, right-click and press Ctrl+P.                                                                                                | Your name, email and time as a watermark; copy, right-click and print blocked; no edit. | <input type="checkbox"/> |
| 23 | OWNER  | Under the proposal, <b>Your decision:</b> choose <b>Yes, go ahead</b> , answer the timeline question, pick a start date, add a note → <b>Give the go-ahead.</b>                                                             | Ready for implementation; your answers are shown; ADMIN notified.                       | <input type="checkbox"/> |
| 24 | ADMIN  | <b>/app/automation/queue</b> → open the opportunity: <b>What the owner asked for</b> shows the answers → assign it to <b>HELPER</b> .                                                                                       | Listed as ready, then assigned.                                                         | <input type="checkbox"/> |
| 25 | HELPER | <b>/app/automation/projects: Create project</b> → <b>Start</b> . Tasks & milestones: add milestone "MVP", add task "Build" in it, mark it Done, complete the milestone.                                                     | Progress bar moves.                                                                     | <input type="checkbox"/> |
| 26 | HELPER | Testing: add test case "Import works" → <b>Start testing</b> → record <b>Fail</b> → <b>Submit for UAT</b> .                                                                                                                 | <b>Refused:</b> "1 required test case has failed".                                      | <input type="checkbox"/> |
| 27 | HELPER | Record <b>Pass</b> → <b>Submit for UAT</b> .                                                                                                                                                                                | Project in UAT.                                                                         | <input type="checkbox"/> |
| 28 | OWNER  | Project → UAT tab → add scenario "I can see my payments".                                                                                                                                                                   | Scenario created.                                                                       | <input type="checkbox"/> |
| 29 | HELPER | Try to record that UAT result.                                                                                                                                                                                              | <b>Refused:</b> "Only the owner of the idea can accept or reject the work."             | <input type="checkbox"/> |
| 30 | OWNER  | Record the scenario as <b>Passed</b> .                                                                                                                                                                                      | Accepted.                                                                               | <input type="checkbox"/> |
| 31 | HELPER | Deployment: environment prod, version 1.0 → In progress → Successful. Then try <b>Complete project</b> .                                                                                                                    | <b>Refused:</b> "Verify the deployment before completing the project."                  | <input type="checkbox"/> |
| 32 | HELPER | <b>Verify</b> the deployment.                                                                                                                                                                                               | Verified.                                                                               | <input type="checkbox"/> |
| 33 | OWNER  | Impact: before <b>240</b> min, after <b>30</b> min, estimated <b>20</b> h/week, measured <b>17.5</b> h/week.                                                                                                                | <b>87.5%</b> time saved, <b>-2.5 h</b> variance; people reduced stays empty.            | <input type="checkbox"/> |
| 34 | HELPER | <b>Complete project</b> .                                                                                                                                                                                                   | Status Completed.                                                                       | <input type="checkbox"/> |
| 35 | ADMIN  | OWNER's idea page, the project's Activity tab, and <b>/app/admin/automation</b> .                                                                                                                                           | Idea → proposal → project → deployment → impact all linked; every step logged.          | <input type="checkbox"/> |

## Part B · Organization idea, ending in rejection

The organization checks the idea before the platform sees it; the platform then rejects it.

| #  | Who    | Do this                                                             | You should see   | ✓                        |
|----|--------|---------------------------------------------------------------------|------------------|--------------------------|
| 36 | HELPER | <b>/app/organizations:</b> create "Test Org", invite OWNER's email. | Invitation sent. | <input type="checkbox"/> |

| #  | Who    | Do this                                                                                                      | You should see                                                               | ✓                        |
|----|--------|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|--------------------------|
| 37 | OWNER  | Copy the invitation link from the backend terminal into OWNER's window → Accept.                             | OWNER is a member of Test Org.                                               | <input type="checkbox"/> |
| 38 | OWNER  | New idea at level <b>Organization</b> (Test Org) → <b>Submit for review</b> .                                | Goes to the organization, not the platform; not in OWNER's own review queue. | <input type="checkbox"/> |
| 39 | HELPER | <b>/app/reviews</b> → request changes.                                                                       | OWNER notified.                                                              | <input type="checkbox"/> |
| 40 | OWNER  | Idea page → <b>Respond to the review</b> → write what you changed → <b>Send response and resubmit</b> .      | Back with the organization; the notification clears.                         | <input type="checkbox"/> |
| 41 | HELPER | Verify it.                                                                                                   | Organization confirmed.                                                      | <input type="checkbox"/> |
| 42 | OWNER  | <b>Submit to the platform</b> .                                                                              | Submitted.                                                                   | <input type="checkbox"/> |
| 43 | ADMIN  | Ideas → <b>Assign to review team</b> → Review Team 1.                                                        | Assigned.                                                                    | <input type="checkbox"/> |
| 44 | HELPER | Start review → rate all criteria → <b>Rejected</b> with a reason → Record decision.                          | Recorded. OWNER still sees Under review and hears nothing yet.               | <input type="checkbox"/> |
| 45 | ADMIN  | <b>/app/admin/decisions</b> : read the drafted letter (it quotes the reason kindly) → <b>Send to owner</b> . | Sent.                                                                        | <input type="checkbox"/> |
| 46 | OWNER  | Open the idea.                                                                                               | A warm "A letter about your idea" card; status Rejected; no actions left.    | <input type="checkbox"/> |

## Part C · Team idea, ending with the proposal declined

A team checks the idea; the platform approves it, but the admin declines the proposal.

| #  | Who    | Do this                                                                  | You should see                                            | ✓                        |
|----|--------|--------------------------------------------------------------------------|-----------------------------------------------------------|--------------------------|
| 47 | HELPER | <b>/app/teams</b> : create a team, invite OWNER.                         | Invitation sent.                                          | <input type="checkbox"/> |
| 48 | OWNER  | Accept with the link from the backend terminal.                          | OWNER is a team member.                                   | <input type="checkbox"/> |
| 49 | OWNER  | New idea at level <b>Team</b> → submit.                                  | Waiting for the team's check.                             | <input type="checkbox"/> |
| 50 | HELPER | Verify it.                                                               | Verified.                                                 | <input type="checkbox"/> |
| 51 | OWNER  | <b>Submit to the platform</b> .                                          | Submitted.                                                | <input type="checkbox"/> |
| 52 | ADMIN  | Ideas → <b>Assign to review team</b> → Review Team 1.                    | Assigned.                                                 | <input type="checkbox"/> |
| 53 | HELPER | Start review → <b>Approved</b> → Record decision.                        | Recorded.                                                 | <input type="checkbox"/> |
| 54 | ADMIN  | <b>Decisions</b> → <b>Send to owner</b> .                                | OWNER gets the congratulations letter.                    | <input type="checkbox"/> |
| 55 | HELPER | Write the proposal with <b>Owner pays = No</b> , fill in the rest, send. | The payment plan section disappears.                      | <input type="checkbox"/> |
| 56 | ADMIN  | <b>/app/admin/proposals</b> → <b>Decline</b> with a reason.              | OWNER notified; no Give the go-ahead button ever appears. | <input type="checkbox"/> |

## Part D · Roles, messages and security

The refusals and the record-keeping around the pipelines.

| #  | Who   | Do this                                                                                                                       | You should see                                      | ✓                        |
|----|-------|-------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|--------------------------|
| 57 | ADMIN | <b>/app/admin/roles</b> : remove HELPER as Developer while Part A's project is still open. (Do this before step 34, or skip.) | <b>Refused</b> : "still delivering an opportunity". | <input type="checkbox"/> |
| 58 | ADMIN | Remove yourself as Delivery manager while delivery work is open.                                                              | <b>Refused</b> : you are the last delivery manager. | <input type="checkbox"/> |

| #  | Who          | Do this                                                                                                                                | You should see                                                                        | ✓                        |
|----|--------------|----------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|--------------------------|
| 59 | <b>OWNER</b> | Open <b>/app/admin</b> .                                                                                                               | <b>Not authorized.</b>                                                                | <input type="checkbox"/> |
| 60 | <b>ADMIN</b> | Try to route one of OWNER's submitted ideas to a team that includes OWNER (make OWNER a reviewer and add them to a second team first). | <b>Refused:</b> "A team member wrote this idea..."                                    | <input type="checkbox"/> |
| 61 | <b>ADMIN</b> | <b>/app/admin/users</b> → deactivate OWNER, then reactivate. Try deactivating yourself.                                                | OWNER is signed out on the next click; deactivating yourself is refused.              | <input type="checkbox"/> |
| 62 | <b>ADMIN</b> | <b>/app/admin/categories</b> : create a category, then retire it.                                                                      | It disappears from OWNER's new-idea form.                                             | <input type="checkbox"/> |
| 63 | <b>ALL</b>   | OWNER and HELPER message each other at <b>/app/messages</b> ; open <b>/app/notifications</b> .                                         | Unread markers clear; every step above left a notification that opens the right page. | <input type="checkbox"/> |
| 64 | <b>ADMIN</b> | Dashboard, Approvals, Reviews, Invitations, Notifications, and a user's audit history.                                                 | All reflect what you did, including each role given and removed.                      | <input type="checkbox"/> |
